

Junior AI Engineer & Interaction Designer

Company: Nexus Interactive Labs

Employment: Remote / Contract

Location: Remote (Flexible Hours)

ABOUT THE ROLE

Nexus Interactive Labs is seeking an ambitious Computer Science & Design student or recent graduate to prototype next-generation generative AI workflows. In this role, you will bridge technical prompt engineering with human-computer interaction, translating experimental model behaviors into intuitive, clean web interfaces.

CORE RESPONSIBILITIES

- Design, implement, and benchmark multi-prompt LLM pipelines using modern developer APIs (Google Gemini, OpenAI).
- Prototype lightweight web interfaces and services to demonstrate new AI interaction patterns and user flows.
- Conduct systematic UX testing, evaluating response quality, edge-case failure modes, and latency across prompt versions.
- Translate wireframes and interaction specs into responsive frontend components.

MANDATORY REQUIREMENTS

- Enrolled in or completed a degree in Computer Science, Human-Computer Interaction, Design, or a related discipline.
- Strong programming foundation in Python and core web technologies (JavaScript, HTML5, CSS3).
- Hands-on experience calling LLM API endpoints and designing structured JSON prompt pipelines.
- Proficiency with UI/UX prototyping and wireframing tools such as Figma.
- Strong analytical mindset with clear technical communication skills.

PREFERRED QUALIFICATIONS

- Experience building backend API services using FastAPI.
- Familiarity with modern frontend component development (React or Tailwind CSS).
- Demonstrated personal or academic portfolio projects involving generative AI or conversational interfaces.

WHAT WE OFFER

- Flexible contract schedule tailored around academic commitments.
- Hands-on mentorship in production AI system design and evaluation.
- Direct contribution to portfolio-ready generative AI tools.
